Profile

Second-year Computer Engineering student (DUT) at EST Meknès, Morocco. I like building tools that a real business uses, and I always check that they work outside the test suite. I am looking for a two-month internship, April to May 2027, in AI, data or full-stack development, on site, abroad or remote.

Experience

Developer Intern July 2026

BFRET (Black Service Solutions), transport software company, Casablanca, remote

- Designed an algorithm that ranks fuel stations by the real saving once the round-trip detour is paid for, not by the price on the sign.
- Built the API in Python with FastAPI, SQLAlchemy and Alembic, and the interface in React, TypeScript and Tailwind with a Leaflet map.
- Turned the prototype into a platform for several companies: JWT login, three roles, data kept separate per company, savings tracking.
- Wrote 167 automated tests (pytest and Vitest), all passing. The app runs on free public data, with no infrastructure cost.

Projects

Kounach, point of sale and stock for a stationery shop In progress, in-store pilot planned

React, TypeScript, IndexedDB (Dexie), PWA, Vitest

- Works without internet and is built to check out a customer in under 30 seconds with the keyboard and a barcode scanner.
- Handles stock, the customer credit book the owner kept on paper, and teachers' print orders. 301 automated tests.

Fuel-alert verification agent, InnoSoft Tracking In progress, demo on simulated data

Python, scikit-learn, Streamlit, SQLite

- An expert confirms each fuel-theft alert, and every answer retrains the model (Isolation Forest, then Random Forest).
- The model closes only very safe false alerts on its own. 10% of those go back to the expert, and a single mistake switches the automation off.

Skills

AI and data	Machine learning, data science, Python, Pandas, NumPy, scikit-learn, TensorFlow, Keras, Isolation Forest, K-Means
Back end	FastAPI, SQLAlchemy, Alembic, SQL (MySQL, SQLite), REST APIs, JWT, PHP
Front end	React, TypeScript, Tailwind CSS, Vite, Leaflet, HTML, CSS, JavaScript
Tools	Git, GitHub, Docker, pytest, Vitest, C++

Education

DUT in Computer Engineering Since 2025

École Supérieure de Technologie de Meknès, Moulay Ismail University

Lab work: evaluation metrics (scikit-learn), neural networks (Keras), BFS, DFS and A* search, PHP and MySQL web apps.

Baccalaureate in Physical Sciences, highest honours (Très Bien) 2024

Lycée Moulay Idriss Al Akbar, Sefrou

Certification

CS50's Introduction to Programming with Python (CS50P), Harvard University

Languages

Arabic	**French**	**English**
